

rConfig gives engineering teams a dependable record of their network configurations. Back up devices automatically, compare versions, trace changes, restore configurations and keep evidence ready for the next audit. From a free, open source starting point to distributed operations across customers and regions, the platform grows with the network.

Current platform generation

At a glance

Company	OS Informatics Limited, trading as rConfig
Headquarters	Ireland
Founder and CTO	Stephen Stack
Chief Operating Officer	Louise Hartnett; joined the executive team in 2026
Origins	Began in 2010; publicly released as an open source project in 2012
Who uses it	Network teams at enterprises, MSPs, telcos, service providers and public bodies

What the platform does

Protect the configuration record. Automate backups and keep searchable version history across different network vendors.

See and act on change. Compare configurations, identify drift and support controlled recovery when something goes wrong.

Operate with evidence. Apply compliance checks, access controls and reporting to everyday network work; available capabilities vary by edition.

Product family

Core	Free, open source network configuration backups and version history.
Pro	Production NCM with deeper change visibility, control and automation.
Enterprise and Vector	Distributed collection, central oversight and customer or site isolation for large estates and service providers.
Vector Prism	Branded, access-controlled configuration portal for MSP customers.

The story in one paragraph

Founded by network engineer Stephen Stack, rConfig grew from a practical need to replace fragile backup scripts with a reliable view of what is running on the network. Today, the Irish-built platform brings configuration backup, change tracking, compliance and automation together for teams managing everything from a single site to distributed, multi-tenant estates. Louise Hartnett joined the executive team as Chief Operating Officer in 2026, bringing dedicated operational leadership as the company expanded internationally.
